

Using Mongo with it's Java driver can be tricky
Jongo makes it way easy

Origin

8 months on a Mongo real-life application

Pleased by Mongo shell querying

— No Java easy way to query in BSON

No Java easy way to marshal results

Make it easy

```
SHELL
db.peoples find ({age: {$gt: 18}})
JAVA DRIVER peoples find (new DBObject ("age",
        new DBObject("$gt", 18));
JONGO
peoples find "{age: {$gt: 18}}")
```

In a nutshell

Kata

Marketing asks for users between 20-30 & 50-60 years old

Under the hood

- Binds Jackson to Mongo Java driver with the slightest glue code possible
- Made of 1500 lines of code

— Minimum effort to support future operators

— Handle polymorphism and partial loading

Since 0.3

6x faster: now as fast as Mongo Java Driver

Configurable/replaceable marshalling process

— Use Strings to handle _id

What's next

Automatic partial loading

— Mongo dump
